Briefing sheet

[United Kingdom](#) | [Summary](#) | [Briefing sheet](#)

June 3rd 2020

Political and economic outlook

- The December 2019 election gave the government of Boris Johnson, the prime minister, a secure majority and a strong mandate to pursue an interventionist economic policy, and The Economist Intelligence Unit expects the coronavirus crisis to reinforce this orientation.
- On January 31st the UK left the EU after 47 years of membership. The UK is currently in a transition period lasting until December 31st 2020, during which time it will remain in the single market and customs union.
- The future UK-EU relationship remains highly uncertain. The coronavirus outbreak has slowed the progress of talks on the future relationship, making a comprehensive deal unlikely by December 2020. We do not expect the government to request an extension.
- The Treasury will provide £350bn (US\$440bn) in loans to support business and to cover 80% of workers' wages. Falling revenue and increased government spending will result in a fiscal deficit reaching 14.9% of GDP and public debt of 107.6% of GDP in 2020.
- The Bank of England (BoE, the central bank) has cut rates to historic lows of 0.1% and created a £200bn bond-buying programme. The BoE will directly finance government spending temporarily via the Ways and Means

One-click report : United Kingdom ,March 21st 2024

facility.

- The outbreak of the novel coronavirus has caused all non-essential retail activities to be suspended. Owing to this and the global spread of the virus we expect real GDP to decline by 8.7% in 2020, before rebounding by 5.8% in 2021.

Market opportunities

One-click report : United Kingdom ,March 21st 2024

Key changes since May 6th

- Preliminary real GDP figures for the first quarter show a quarter-on-quarter decline of 2% (-1.6% year on year); the decline was concentrated in March.
- Government consumption fell by 4.6% in January-March on a quarterly basis (-0.1% year on year), leading us to revise our government consumption forecast from growth of 8% to 6% in 2020.
- Lockdown provisions have begun to be relaxed, with schools beginning to open on June 1st and non-essential shops allowed to open from June 15th. We expect demand to remain suppressed, as many social distancing measures are set to continue.
- Public-sector borrowing figures in April set a new record, with public-sector net debt reaching £1.9trn (US\$2.4trn). As a result, we have revised our 2020 fiscal deficit forecast wider, from 14.1% of GDP to 14.9%, and revised up our debt/GDP forecast to 107.6%
- Brexit talks in May and June have not made much progress. As a result, we believe that there is an increased likelihood of significant disruption as the UK leaves the single market at end-2020, and we have revised down our growth forecast for 2021.

The month ahead

- June 15th and July 4th—Lockdown easing: Mr Johnson has announced that some non-essential shops can be reopened under social distancing restrictions from June 15th, with further openings on July 4th if cases continue to decline. We expect a modest increase in retail sales as a result.
- June 12th—Monthly GDP (April): March data showed a 4.8% monthly decline in GDP, despite the lockdown only beginning in the final week of the month. We expect April figures to show double-digit declines in GDP, as the

One-click report : United Kingdom ,March 21st 2024

lockdown was in place for the full month.

- June 18th—Meeting of the monetary policy committee (MPC) of the BoE: The BoE has suggested that it may expand its asset purchasing programme, which began in March, and two MPC members voted in support during its previous meeting. We expect that the BoE will therefore agree to a modest increase in the programme at this meeting.
- June 30th—Brexit extension deadline: This is the final date for talks to be extended via the existing treaty, as well as the date by which an agreement would have to be reached on fisheries. We do not expect an extension or a fisheries agreement, and expect negotiations to continue throughout the summer.

Major risks to our forecast

Scenarios, Q2 2020	Probability	Impact	Intensity
The UK leaves the transition period on December 31st 2020 without a deal, exacerbating the recession	Very high	High	20
The coronavirus recession leads to a wave of corporate failures	High	High	16
The labour market cannot bounce back from lockdowns	High	High	16
The new UK-EU relationship fails to resolve legal uncertainty created by Brexit	Very high	Moderate	15
An uncontrolled second wave of coronavirus causes another lockdown in the autumn	Moderate	Very high	15

Note. Scenarios and scores are taken from our Risk Briefing product. Risk scenarios are potential developments that might substantially change the business operating environment over the coming two years. Risk intensity is a product of probability and impact, on a 25-point scale.

^a Actual. ^b Economist Intelligence Unit forecasts. ^c General government. ^d Economist Intelligence Unit estimates.

Political stability

[United Kingdom](#) | [Politics](#) | [Forecast](#) | [Political stability](#)

June 3rd 2020

Following a general election on December 12th 2019 the Conservative Party, under the prime minister, Boris Johnson, won an 81-seat majority. On January 31st 2020 Mr Johnson fulfilled his campaign promise to take the UK out of the EU, ending 47 years of EU membership and three and a half years of political deadlock on the issue. Despite the challenges posed by the coronavirus crisis, The Economist Intelligence Unit expects the government to last a full term, with the UK's institutional capacity and policy flexibility allowing it to mount a significant response.

The government had expected to spend 2020 focusing on negotiating a free-trade relationship with the EU and commencing a spending and investment programme to increase British productivity. However, the spread of the novel coronavirus has moved the government to a crisis-management footing that we expect to last throughout 2020. The government's first aim has been to slow the spread of the disease and expand the capacity of the National Health Service (NHS) to prevent it from becoming overwhelmed. To this end, on March 23rd the government directed all residents to stay at home, leaving only for a limited number of essential reasons. This followed an earlier order mandating all non-essential shops and entertainment venues to close. The government put together an economic support package worth more than £350bn (US\$440bn) to protect businesses and workers affected by these closures.

One-click report : United Kingdom ,March 21st 2024

New deaths from the virus have been subsiding since a peak around April 8th, although the total number of cases remains high relative to other European countries, as the UK implemented its lockdown later. As caseloads have declined, the government has begun to transition gradually out of lockdown, allowing some pupils to return to school from June 1st, with non-essential shops to open on June 15th followed by further loosening from July 4th. Some restrictions are likely to remain in place throughout 2020, and a second out-break later in the year remains a risk. In that contingency the government is more likely to pursue targeted regional lockdowns than a second nationwide lockdown.

Brexit continues to pose a medium-term risk to the integrity of the UK. Nicola Sturgeon, the leader of the Scottish National Party (SNP), has argued that Brexit represents a material change in the relationship between Scotland and the rest of the UK since the referendum on Scottish independence in 2014, which resulted in a majority favouring the union. Ms Sturgeon may seek to dramatise the issue through legal battles or other disruptive means, particularly if her party wins a majority in the 2021 Scottish parliament elections. Brexit has also inflamed tensions in Northern Ireland, where the Northern Irish protocol in the withdrawal agreement is unpopular among Northern Ireland's Unionists, as well as among nationalists, and polling has shown a small but significant swing in favour of Irish reunification in the North.

Election watch

[United Kingdom](#) | [Politics](#) | [Forecast](#) | [Election watch](#)

June 3rd 2020

We expect the government to last a full term. Under the Fixed-term Parliaments Act (FTPA) that governs elections, the next general election is scheduled for May 2nd 2024. The Conservative manifesto pledged to repeal the FTPA.

One-click report : United Kingdom ,March 21st 2024

How-ever, even if this takes place, general elections must be held by the fifth year of a parliament, usually taking place in May to coincide with local elections.

After its defeat in the 2019 election, when it won its lowest seat total since 1935, the opposition Labour Party replaced its leader, Jeremy Corbyn, with Keir Starmer, the former shadow Brexit secretary. Mr Starmer is more moderate than Mr Corbyn, but has maintained Mr Corbyn's anti-austerity position, which will make it challenging for the government to cut day-to-day spending in the second half of our forecast period should public finances deteriorate. For Labour to gain a majority, it would require a gain of over 120 seats, a feat that has occurred only once since the second world war. However, for the Conservatives to lose their majority and enter a hung parliament, they would have to lose only 41 seats, a swing that has occurred in ten of the 20 post-war elections.

International relations

[United Kingdom](#) | [Politics](#) | [Forecast](#) | [International relations](#)

June 3rd 2020

Despite leaving the EU on January 31st, the UK-EU relationship remains unsettled. The UK is currently scheduled to exit the transition period with the EU on December 31st. This deadline can be extended by mutual agreement between the UK and EU by June 30th, but the UK government has ruled out doing so. The UK and EU governments had set out a timetable for negotiations that envisaged a comprehensive free-trade agreement (FTA). The major area of disagreement concerns the degree to which the UK would have to update its labour, environmental and state-aid provisions to maintain deep access to the EU market without undercutting EU standards. However, talks have been delayed and deprioritised by governments owing to the pandemic. Only three week-long discussion rounds via video-conference were scheduled between April and the June 30th extension deadline, and no significant progress

One-click report : United Kingdom ,March 21st 2024

was made in these talks. As a result, we do not believe that it is possible to fully agree a comprehensive FTA on the existing timetable.

This will pose significant risks at the end of 2020. The government had previously been willing to impose additional compliance costs on business with the expectation that in a growing economy they would innovate and adapt to less preferential terms of trade. However, the coronavirus outbreak and the threat of an outright collapse of much of the business sector have made the imposition of new compliance costs on export-oriented businesses more risky, as many of these businesses are likely to be less able to withstand further shocks. Another risk is staff shortages in the NHS if immigration policy changes.

In its withdrawal agreement from the EU the UK agreed to a separate protocol for Northern Ireland in order to avoid the presence of physical border checks with the Republic of Ireland. Under this agreement Northern Ireland will remain within a regulatory union with the EU for most goods. Although it will remain in the UK customs and value-added tax (VAT) areas, customs and VAT checks will be conducted by the UK on the EU's behalf at ports in the Irish Sea for any goods bound for the EU. Checkpoints and a border infrastructure between Northern Ireland and the rest of the UK will need to be constructed, progress on which is only just beginning, presenting a major implementation risk.

As a result of these risks, we believe that a limited accommodation with the EU will be necessary to limit the scale of disruption, but that it will fall well short of a comprehensive agreement. New barriers to UK-EU trade will therefore come into effect from 2021, slowing the UK's economic recovery. The situation remains highly uncertain and any agreement with the EU will not occur until the end of 2020, creating a high risk of a disorderly exit with no deal, which will compound the economic disruption from the coronavirus pandemic.

Policy trends

[United Kingdom](#) | [Economy](#) | [Forecast](#) | [Policy trends](#)

June 3rd 2020

Even prior to the coronavirus pandemic, the UK faced significant economic policy challenges—including low public investment, significant regional disparities, high housing costs and chronically low productivity growth—and these have been allowed to build up, as Brexit has dominated the government's agenda. However, the scale of the disruption caused by the coronavirus is likely to dominate the government's policy agenda throughout 2020. Large sections of the economy are currently shut down, and even once they are reopened both domestic and global demand will remain suppressed. We do not expect the UK to reach its pre-crisis GDP before 2023. Managing the recovery will therefore become the government's primary priority.

Mr Johnson moved his party away from the austerity policies advocated by his predecessors and planned to pursue significant increases in public-sector investment, including in infrastructure and additional current spending on the NHS, education and the police. He also planned to reform the UK's immigration system to emphasise skilled labour. Long-term social care is an area of health spending that Mr Johnson's manifesto pledged to address, although the particulars remain vague. We expect the government to incorporate these priorities into its recovery strategy. Although we do not expect a return to austerity, the government will face increased fiscal constraints once the crisis passes.

One-click report : United Kingdom ,March 21st 2024

Fiscal policy

One-click report : United Kingdom ,March 21st 2024

[United Kingdom](#) | [Economy](#) | [Forecast](#) | [Fiscal policy outlook](#)

June 3rd 2020

The chancellor of the exchequer, Rishi Sunak, has developed a series of economic support packages designed to give financial aid to workers and businesses affected by the coronavirus and associated shutdowns until the situation normalises. These include over £330bn in government-backed loans; a commitment to pay salaried and self-employed workers up to 80% of their previous earnings, to a maximum of £2,500 (US\$3,100) a month; several business tax deferments and holidays; and more targeted aid to the worst-affected sectors, such as travel and retail. The government expanded and adjusted these programmes, increasing the government guarantee for small businesses from 80% of loans to 100%. As a result, we expect government spending to reach 47.5% of GDP in 2020, up from 41% in 2019, with the fiscal deficit widening to 14.9% of GDP and total debt reaching 107.6% of GDP. The government has announced plans to taper its furlough scheme from August, before ending the scheme fully in October. However, we expect that further stimulus and state aid will be necessary, particularly in the event of a disorderly end to the Brexit transition period. We expect the budget deficit to remain high in 2021, and forecast a public debt/GDP ratio of 107.6% as tax revenue remains constrained by the slow recovery and Brexit uncertainty. We expect the debt/GDP ratio to decline from 2022, falling back to 103.4% by the end of our forecast period in 2024. We expect the government to undertake some fiscal consolidation, but given the political unpopularity of the previous period of austerity, we believe that this is likely to take the form of tax increases rather than spending cuts.

Monetary policy

[United Kingdom](#) | [Economy](#) | [Forecast](#) | [Monetary policy outlook](#)

June 3rd 2020

On March 19th the Bank of England (BoE, the central bank) cut its main rate to 0.1%, the lowest level in its history. It has also unveiled a £200bn bond-buying programme covering both corporate and government debt, which it developed in collaboration with the Treasury to facilitate the smooth functioning of government and private debt markets. On April 9th the BoE announced that it would directly finance extra government spending to allow government departments to finance the day-to-day costs of fighting the coronavirus. The BoE said that both its bond-buying programmes and monetary financing of government spending are temporary and expected to be paid back, the latter by the end of the year. However, we expect that the BoE will continue to facilitate transactions that will allow the government to borrow at favourable rates throughout the forecast period, although we do not expect them to reduce rates below zero. We expect that the BoE will gradually raise rates from 2022.

June 3rd 2020

The impact of the coronavirus: global and regional assumptions

The Economist Intelligence Unit's forecasts are built on a series of epidemiological assumptions about the novel coronavirus (Covid-19). Without rapid access to a vaccine, we expect that the disease will eventually infect up to 30% of the world's population. We assume that about 15% of symptomatic cases will be severe and that up to 1% of symptomatic cases will prove fatal. Death ratios will depend on a country's ability to detect, track and contain the virus, and the capacity of the national health system. Governments are lifting restrictions on freedom of movement gradually in countries where the number of cases is falling and where there is sufficient spare capacity in the healthcare system. Some countries may be forced to re-impose measures if cases spike again. Based on previous viral outbreaks and the progress made on other coronavirus vaccines (such as that for severe acute respiratory syndrome—SARS), we expect a vaccine to be available by end-2021.

In economic terms, we forecast that global output will contract by 4.2% year on year in 2020 and that global trade will decline by 24.8%. Global GDP will not recover to pre-coronavirus levels before at least 2022; 2020 and 2021 will

One-click report : United Kingdom ,March 21st 2024

be lost years for growth. Real GDP will contract in all regions of the world, but the drop in output will be especially severe in OECD countries. All G7 countries and almost all G20 countries will experience a full-year recession in 2020. We expect China's real GDP growth to slow sharply to 1% this year, and forecast a full-year recession in the US, with a contraction of 4%. We assume that oil prices will decline by more than 40% this year, to average US\$38/barrel. Most countries have responded with huge fiscal expansion to support businesses and households, raising the risk of sovereign debt crises in the medium term. Central banks have cut interest rates and, more importantly, have stepped up as buyers of last resort for government and corporate debt.

Europe is heading towards a historic recession this year. Most governments started to relax some of the rules governing social and economic behaviour in May, but economic activity will remain greatly impeded. We assume that the worst of the economic damage will occur in the second quarter of 2020, when most economies have been subject to the strictest containment measures. The euro zone will register a full-year recession in 2020, with a forecast contraction in GDP of 8%, as output in all of the bloc's economies will contract. Supply-side effects include disrupted global supply chains, a sharp fall in working hours and a spike in business failures. Demand-side effects are likely to be longer lasting. Even once lockdowns are eased, people are likely to avoid public spaces for fear of contagion and to hold off on travel plans. Households will limit their consumption in response to a loss of income, and businesses will delay investment. We expect a bounce-back in the third quarter, after the outbreak has peaked, but confidence will remain subdued.

The political and geopolitical impact of the crisis will be significant. The pandemic has resulted in an extraordinary expansion of executive powers, with limited parliamentary oversight. Elections have been cancelled in some countries. When the pandemic has passed, governments will face intense scrutiny on their response. Failure to address the humanitarian crisis triggered by the coronavirus could further erode trust in national institutions. A severe global economic crisis, followed by large-scale unemployment, could fuel a new wave of popular protests. The crisis may encourage support for the nation state and a backlash against globalisation and open borders. It will also

One-click report : United Kingdom ,March 21st 2024

intensify the competition for global leadership between China and the US, and a realignment of geopolitical spheres of influence may ensue in Europe, Africa and other regions.

Economic growth

UK growth was slow in 2018 and 2019, at 1.3% and 1.4% respectively, owing to softening global demand and Brexit-related political turmoil. However, the coronavirus pandemic and ensuing public-health measures will cause a severe contraction in 2020. The exact degree of economic disruption is subject to significant uncertainty and will depend on the progress of the disease, the effectiveness of the public-health measures, and the likelihood and intensity of further outbreaks. We forecast that real GDP will contract by 8.7% in 2020, concentrated in the first two quarters of the year. We expect that fourth-quarter real GDP will be about 5% below its year-earlier level. In 2021 we forecast a rebound in real GDP of 5.8%, but most of this will be due to base effects, as the 2020 reference year will have been suppressed by the lockdown. We expect Brexit uncertainty to slow the recovery in 2021, and do not expect the level of real GDP to exceed its 2019 peak until late 2023.

Growth since the EU referendum has been driven by private consumption—supported by real wage growth, which reached post-financial-crisis highs in 2019, and a 2019 unemployment rate of 3.8%. However, we expect unemployment to spike significantly this year, reaching 8.7%, and this figure will significantly understate the true degree of economic disruption, as up to 8m workers (almost a quarter of the labour force) will be covered by the government's furlough scheme and will not be considered unemployed. We also expect wage growth to decline, as the furlough scheme will cover only 80% of workers' salaries in affected sectors. These trends will be partly reversed once the pandemic abates, and we expect unemployment to fall to 6.8% in 2021 and to continue to decline thereafter.

We also expect gross capital formation to decline sharply as the highly uncertain business environment depresses investment. We expect a bounce-back in 2021 and 2022 owing to pent-up demand, and expect the government to

One-click report : United Kingdom ,March 21st 2024

accelerate its plans to encourage greater investment once the pandemic is resolved. Investment growth should stabilise in 2023-24 at an annual average of 3.4%.

We forecast that export and import growth will turn sharply negative in 2020 as global demand collapses and coronavirus-related travel restrictions persist. The collapse in overall demand will improve the UK's current-account balance as imports decline, with the deficit shrinking to a forecast 2.2% of GDP in 2020 from 3.8% in 2019, before expanding again from 2021.

Economic growth

%	2019 ^a	2020 ^b	2021 ^b	2022 ^b	2023 ^b	2024 ^b

^a Actual. ^b Economist Intelligence Unit forecasts.

One-click report : United Kingdom ,March 21st 2024

Inflation

[United Kingdom](#) | [Economy](#) | [Forecast](#) | [Inflation](#)

June 3rd 2020

We expect price pressures to subside in 2020 and 2021 after inflation averaged 1.7% in 2019, although the weakness of the pound will exert some inflationary pressure. The impact of the coronavirus is expected to depress demand in many sectors of the economy, and global competition between Russia and Saudi Arabia will keep oil prices subdued. These conditions will improve from the second quarter of 2021, and we expect demand to increase steadily as uncertainty declines, lifting inflation to an average of 1.5% by the end of the forecast period in 2024.

Exchange rates

[United Kingdom](#) | [Economy](#) | [Forecast](#) | [Exchange rates](#)

June 3rd 2020

The value of the pound has been volatile in recent years owing to the UK's large current-account deficit, which requires massive international capital investment to support sterling. Since 2016 this has manifested itself in increased volatility around political events, as investors saw the UK's relationship with the EU as a proxy for its investment prospects. Similar behaviour is likely to continue throughout the coronavirus crisis. Sterling saw a sharp decrease against the dollar in March, reaching a 35-year low of US\$1.15:£1, as investors engaged in a flight to safety as firms faced a dollar liquidity shortage. The establishment of swap lines between the Federal Reserve (the US central bank) and other central banks, including the BoE, reversed this trend to some degree, and sterling recovered

One-click report : United Kingdom ,March 21st 2024

to US\$1.25:£1 by end-April. However, we expect sterling to remain volatile throughout the crisis period and into 2021 as the UK leaves the Brexit transition period. Looking ahead, we expect sterling to appreciate gradually from 2021 as the crisis abates, reaching US\$1.41:£1 by the end of the forecast period.

External sector

[United Kingdom](#) | [Economy](#) | [Forecast](#) | [External sector](#)

June 3rd 2020

The outbreak of coronavirus caused a sharp decline in global trade as demand declined, travel was disrupted and global supply chains were compromised by national lockdowns. The UK has not been exempt from this, and we expect that both imports and exports will decline sharply in 2020. This will cause the UK's current-account deficit to shrink from the equivalent of 3.8% of GDP in 2019 to 2.2% of GDP in 2020. From 2021 we expect trade to rebound, although this will primarily be due to a recovery from the 2020 base year, and we expect Brexit to weigh on exports (as well as imports, but to a lesser extent). Trade will continue to grow thereafter, but we do not expect the value of total imports to return to pre-crisis levels before 2024 or the value of total exports to do so within the forecast period.

Country forecast overview: Business environment rankings

[United Kingdom](#) | [Business](#) | [Business environment](#) | [Rankings overview](#)

June 3rd 2020

Value of index ^a		Global rank ^b		Regional rank ^c	
2015-19	2020-24	2015-19	2020-24	2015-19	2020-24
7.80	7.84	17	19	11	11

^a Out of 10. ^b Out of 82 countries. ^c Out of 18 countries: Austria, Belgium, Cyprus, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey and the UK.

- The UK’s business environment score improves in the forecast period (2020-24) compared with 2015-19. The UK remains in 11th place in the regional rankings, but declines by two places in the global rankings. Brexit introduces policy uncertainty, but the country’s strengths—including a pro-business policy stance, a welcoming attitude to foreign investment, and flexible labour and product markets—will continue.

Business environment at a glance

[United Kingdom](#) | [Business](#) | [Business environment](#) | [Business environment at a glance](#)

June 3rd 2020

Policy towards private enterprise and competition

2020-21: Coronavirus shuts down large segment of retail. Public support for re-nationalisation of rail sector and utilities.

2022-24: Revamp of regulatory and competition frameworks. Continued state support underpins house prices.

Policy towards foreign investment

2020-21: Coronavirus and Brexit uncertainty limits investment opportunities.

2022-24: Infrastructure plans offer investment opportunities. Possible changes in tax policies to bolster inward investment.

Foreign trade and exchange controls

2020-21: Brexit transition and coronavirus create significant trade uncertainty. New Northern Irish protocol implemented. Talks continue on UK-EU free-trade agreement. Significant risk of "cliff edge" transition for businesses.

2022-24: Expected decline in UK-EU crossborder trade. New trade agreements with other countries, including US, possible.

One-click report : United Kingdom ,March 21st 2024

Taxes

2020-21: Tax holidays and deferments throughout the duration of the crisis. Depressed revenue due to decreased activity.

2022-24: Ongoing efforts to reduce revenue lost to growing tax avoidance and evasion. Possible changes to the value-added tax (VAT) framework if the UK leaves the EU's VAT regime after 2020.

Financing

2020-21: Monetary policy remains highly accommodative. "Ring-fencing" bank reforms and ongoing capital strengthening. Steady growth in alternative forms of debt financing.

2022-24: Loss of "passporting" rights and restrictions on EU services trade. Modest decline in City of London's status.

The labour market

2020-21: Spike in unemployment from coronavirus. Phased increase in compulsory national living wage.

2022-24: End to free movement of labour from EU after Brexit, but greater liberalisation overall

Infrastructure

2020-21: Modest rise in spending on housing, roads and digital infrastructure. Crossrail service in London begins operation.

One-click report : United Kingdom ,March 21st 2024

2022-24: Increased infrastructure investment, emphasis on "levelling up" regional infrastructure and competitiveness.

Technological readiness

2020-21: High e-commerce penetration and strong research base, but UK research and development (R&D) spending below EU average and limited provision of e-government services. Continued high threat from cybercrime and cyber-espionage.

2022-24: Possible weakening of research and innovation framework owing to exit from—or more restricted access to—EU structural programmes (such as "Horizon 2020") and project financing schemes. Modest rise in public R&D spending.

One-click report : United Kingdom ,March 21st 2024

Global position

[United Kingdom](#) | [Regulation](#) | [Global position](#)

December 1st 2019

The outlook for the UK has become much more uncertain following the 2016 referendum vote to leave the EU. The UK began the formal process of exiting the bloc in March 2017 when it triggered Article 50 of the Lisbon Treaty. This provided for a two-year exit time frame, although the UK has since asked for three Article 50 extensions, with departure now expected on or by January 31st 2020. A general election takes place in the meantime, on December 12th 2019. The UK and EU have negotiated a withdrawal agreement that allows for a transition period lasting until end-2020 (with an extension possible), during which the UK would retain most aspects of EU membership. Looking beyond the transition period, the UK and EU intend to work towards a free-trade agreement, with the degree of regulatory alignment between the two parties still to be determined. Real GDP growth is expected to be relatively

One-click report : United Kingdom ,March 21st 2024

subdued during the next few years, reflecting Brexit-related uncertainties. The UK still has much to offer as an investment destination. Existing clusters and economies of scale in sectors such as pharmaceuticals, biotechnology, software development and financial services will remain powerful magnets for foreign entrants, while significant potential exists for large-scale, long-term investments in the energy and transport sectors.

Regulatory/market assessment

[United Kingdom](#) | [Regulation](#) | [Regulatory/market assessment](#)

December 1st 2019

- In October 2019 the government stated its intention to implement legislation expanding its powers to block business transactions that can pose national security risks. Development of the reform was halted after the calling

One-click report : United Kingdom ,March 21st 2024

of a general election scheduled for mid-December 2019. Discussions were also cut short on a proposed digital sales tax targeting foreign companies that do substantial business in the UK but pay relatively little tax there.

- In November 2019 the government declared a moratorium on hydraulic fracturing (fracking), which took immediate effect. The move follows the publication of a report from the Oil and Gas Authority, an industry regulator, on the difficulties of predicting the environmental and safety impacts of the practice.
- A March 2019 reform ends the so-called Swedish derogation, which excludes agency workers from the right to pay parity with permanent employees in the company where they are assigned if they are paid between work assignments. The measure takes effect in April 2020.

Regulatory/market watch

[United Kingdom](#) | [Regulation](#) | [Regulatory/market watch](#)

December 1st 2019

- Negotiated in October 2019, the most recent withdrawal agreement between the UK and EU sets a new Brexit deadline at January 31st 2020, following three extensions from the initial target of March 29th 2019. The agreement allows for a transition period lasting until end-2020 (with a possible two-year extension), during which the UK retains most aspects of EU membership including participation in the single market and customs union.
- The withdrawal agreement states that the UK and EU will work towards a free-trade agreement that will clarify their future relationship following the conclusion of the transition period. It envisages that the UK will leave the EU single market and customs union (with special arrangements for Northern Ireland), leaving it free to negotiate trade deals with non-EU countries.

One-click report : United Kingdom ,March 21st 2024

- The withdrawal agreement still requires ratification by the UK and EU to take effect. Results from the UK's general election scheduled for mid-December 2019 will determine how and whether the country passes the agreement in its current form.
- Brexit has put into question the privileged access that nationals from the European Economic Area (the EU plus Iceland, Liechtenstein and Norway) and Switzerland currently enjoy to the UK's labour market. While workers already in the UK can apply for "settled status", the direction of policies targeting new labour migrants remains in flux and inevitably will reflect the composition of government following the December 2019 election.
- Brexit has also compromised the UK's continued access to EU development funding, which will end following the conclusion of the proposed transition period. The Conservative government has proposed the development of a UK Shared Prosperity Fund to replace the EU programmes, but this had not been finalised as of end-November 2019.
- Brexit will mean that the European Court of Justice no longer has broad powers to challenge UK tax law—a particularly contentious area in the past. After leaving the EU, the UK will likely have to balance its new abilities to reform EU laws and overturn precedent with the need to maintain a competitive business environment.
- In November 2019 Prime Minister Boris Johnson announced the Conservative Party would scrap a planned reduction in the corporate income tax rate from 19% to 17% in April 2020, if it wins the upcoming general election. The move aims to support spending on public services.
- Brexit raises the possibility of divergence between UK and EU competition law. The exact outcome will depend on the model the UK adopts in its future relationship with the EU and will likely involve a slow process. EU competition rules would continue to apply to UK companies conducting business within EU member states after the UK leaves the bloc.

One-click report : United Kingdom ,March 21st 2024

- The recent withdrawal agreement proposes that Northern Ireland would stay within a regulatory union with the EU for most goods, remaining in the UK customs and value-added tax (VAT) areas and with checks conducted by the UK on the EU's behalf for any goods bound for the EU across the Irish Sea. The arrangement would be subject to revision every four years by a majority vote in the Northern Ireland Assembly.

Automotive

[United Kingdom](#) | [Automotive](#) | [Overview](#)

April 10th 2020

- The UK is the world's 13th-largest automotive manufacturer and sixth-largest vehicle market, according to the International Organisation of Motor Vehicle Manufacturers (OICA). Output expanded steadily between 2010 and 2016, but has since fallen sharply amid political uncertainty, weaker domestic and export demand, regulatory changes and a structural shift away from diesel. Total vehicle production in 2019 declined by 14% to a decade-low level.
- The coronavirus (Covid-19) pandemic and the severe quarantine restrictions will result in an unprecedented collapse in global economic activity in 2020 and significant supply-side disruption across the automotive industry. The economic fallout will place financial strain on carmakers, lead to job losses, further consolidation, delays in investment and perhaps bankruptcies. As at early April 2020, virtually the entire automotive sector was in shutdown.
- In the UK, the process of exiting the EU (Brexit) will add to risks. There is likely to be a permanent (and possibly large) negative hit to the capacity of the auto sector, which was already struggling amid falling demand, the need

One-click report : United Kingdom ,March 21st 2024

for large-scale investment in electric vehicle (EV) technology and competition from lower-cost manufacturing locations.

^a Economist Intelligence Unit estimates. ^b Economist Intelligence Unit forecasts. ^c Actual.

Source: The Economist Intelligence Unit.

- The unclear progression of the disease means that there is huge uncertainty over The Economist Intelligence Unit's forecast. Based on an assumption of a gradual return to economic activity in late 2020, we forecast a 20% annual drop in new-car sales and a 25% decline in commercial vehicle (CV) sales this year.

One-click report : United Kingdom ,March 21st 2024

- We expect that new state-funded stimulus measures will be announced later in 2020 to support a recovery in sales. These may include a vehicle scrappage scheme similar to that in 2009 after the financial crisis. This would encourage a partial bounce-back in sales, but a surge in unemployment, reduced household incomes and greater consumer caution will weigh on underlying demand. We expect new-car sales to rise at a compound annual growth rate of just 0.2% in 2020-24, while new-CV sales will rise at a faster rate of 4%.

Consumer goods

[United Kingdom](#) | [Consumer goods](#) | [Overview](#)

May 29th 2020

- Retail sales volume growth in the UK was fairly resilient in 2016-19, supported by employment gains, low inflation, consumer borrowing and extensive retail discounting. However, momentum weakened in 2019 amid a slowing labour market, subdued real-income growth and the economically damaging Brexit process. Annual volume growth averaged 1.7% in 2016-18, but slowed to 0.9% in 2019, according to Ascential, a provider of global retail intelligence. Official retail data from the Office for National Statistics (ONS) showed annual sales volume growth in the three months to February 2020 at a seven-year low.
- Since late March the coronavirus (Covid-19) pandemic and severe quarantine restrictions have resulted in a dramatic slump in economic activity (and retail spending). Many non-essential retail stores have been closed since March 23rd, when the government imposed tighter social-distancing measures, which had previously been more relaxed than in many advanced economies.
- Amid pockets of growth (such as for groceries and home office equipment), preliminary data point to a decline in the retail sector of over 30% during the lockdown. The relatively slow and lax response of the government to the

One-click report : United Kingdom ,March 21st 2024

crisis has resulted in the UK experiencing one of the highest levels of coronavirus-related deaths in the world, with a high risk of renewed waves of the virus as the government seeks to reopen the economy. The Economist Intelligence Unit expects a gradual relaxing of lockdown provisions from June onwards, but social distancing measures will remain in place (and will be periodically tightened if future outbreaks occur). A degree of consumer caution will persist until a vaccine is available (late 2021 at the earliest), constraining retail footfall and in-store spending. This will accelerate the existing trend towards online shopping, with a large number of retail store closures likely in 2020-21.

- Our current forecast is for annual real GDP to fall by 8.7% in 2020, followed by a partial rebound to growth of 6.7% in 2021 and sluggish growth in 2022-24. We expect a deeper slump, of 9.7%, in retail sales volumes in 2020, amid a spike in unemployment, a fall in aggregate income and sharply reduced tourism. There is huge uncertainty over the progression of the virus and thus on the duration of lockdown measures and the post-crisis impact on consumer behaviour. A temporary uplift in retail spending is likely at some point, reflecting pent-up demand, but household finances will be in a weakened state over 2020-24 (our forecast period).
- The economy will also face disruption related to Brexit when the existing UK-EU transition period expires (scheduled at the end of 2020) and the UK leaves the single market and customs union. This implies a "hard Brexit"—irrespective of whether a future-relationship deal is agreed this year—with increased non-tariff barriers and unresolved regulatory issues from 2021 that will further disrupt supply chains in the retail and food manufacturing sectors.
- The UK is Europe's biggest online retail market, but robust internet sales have gone hand in hand with a steady fall in the number of high-street stores and retail employment. These trends will intensify as a response to the pandemic, amid rising mobile e-commerce (m-commerce) and ongoing social distancing. The UK implemented a new digital services tax in April 2020, targeting multi-national technology groups such as Amazon, Google and Apple (all US).

Energy

[United Kingdom](#) | [Energy](#) | [Overview](#)

June 26th 2020

- Total energy consumption in the UK has trended gradually lower since the mid-1990s, but was fairly stable in 2019 at an estimated 176m tonnes of oil equivalent (toe). This compares with 196m toe a decade earlier. Together, natural gas and oil account for nearly three-quarters of the energy mix. The Economist Intelligence Unit expects total consumption to fall in 2020 owing to the impact of the coronavirus (Covid-19) pandemic. Energy consumption will partly rebound in 2021, and remain little-changed between 2022 and 2029.
- Oil consumption will fall by an annual average of 1.1% between 2020 and 2029, while natural gas consumption will fall marginally, by an annual average of 0.2%. Coal consumption will fall more dramatically, owing mainly to the

One-click report : United Kingdom ,March 21st 2024

planned phasing-out of coal use for power generation by 2025. We expect average annual coal consumption to fall by an average of over 11% over the forecast period, as coal use in the power sector is eliminated from 2025.

- Until a post-Brexit UK-EU trade deal is finalised, uncertainty will persist over many elements of energy policy. This includes the UK's future level of participation in the EU's internal energy market (IEM), the emissions trading system (ETS), the Euratom Treaty for nuclear regulation, interconnector projects to the continent, and various EU research funding schemes. Changes could have implications for energy prices, security of supply and new capacity expansion. Brexit will impose new non-tariff restrictions on trade and is likely to reduce availability of skilled foreign labour. A highly disruptive no-deal Brexit in early 2021 appeared to be the most likely outcome as of mid-June 2020, with UK officials insisting that they were seeking to avoid any future alignment obligations with the EU.

Financial services

[United Kingdom](#) | [Finance](#) | [Overview](#) | [Financial services](#) | [Overview](#)

April 29th 2020

- The UK has one of the world's best developed financial industries, but it faces two major challenges in the coming years: coping with the novel coronavirus (Covid-19) and managing the country's departure from the EU. The first will deliver a sharp, but hopefully short shock to the sector. By contrast, the second is likely to require a long-term shift in trading relationships and may contribute to an on-going shrinkage of the industry.
- London is currently one of the two leading global financial centres (along with New York) and has the largest share of many international markets. The UK financial sector—banking, insurance, fund management, securities and alternative investment—plays a significant role in the economy. In 2019 it accounted for 5.9% of GDP, down from 6.8% five years earlier, according to Eurostat. It employed slightly over 1m residents or 3.2% of the workforce, down from 3.5% five years before. The industry makes a substantial contribution to the balance of payments and tax revenue.
- The outbreak of the novel coronavirus caused all non-essential retail activities to be suspended in March 2020. Owing to this, and the global spread of the virus, The Economist Intelligence Unit expects the UK's real GDP to decline by 4.7% in 2020, before rebounding by 3% in 2021. Large sections of the economy are currently shut down, and even once they are reopened both domestic and global demand are likely to remain suppressed. We do not expect the UK to reach its pre-crisis GDP before 2023. Managing the recovery will therefore become a key priority of the recently re-elected Conservative government.
- The government has been continuously tweaking the fiscal relief packages on offer in order to ensure comprehensive coverage for British households and businesses, most recently expanding a government guarantee

One-click report : United Kingdom ,March 21st 2024

scheme to cover 100% of loans for the smallest businesses, up from 80%, to allow smaller firms easier and faster access to financing. The UK has advantages vis-à-vis its European peer countries in having the longest average debt maturity by a considerable margin and the ability to borrow in its own currency—bolstered by unprecedented monetary-fiscal policy co-ordination.

- The Bank of England (BoE, the central bank) has extended the use of the "Ways and Means" facility through to the end of 2020, allowing the Treasury to borrow directly from the BoE. The BoE governor, Andrew Bailey, has said that these provisions are temporary, but we do not believe that the BoE can credibly commit to withdrawing them in 2021 if it risks sharply worsening the UK's borrowing position.
- Following a general election on December 12th 2019 the Conservative Party, under the prime minister, Boris Johnson, won an emphatic 81-seat majority. This allowed him to achieve his primary campaign promise to leave the EU, which took place on January 31st, ending 47 years of EU membership and three and a half years of political deadlock on the issue. The future UK-EU relationship remains highly uncertain. The coronavirus outbreak has halted negotiations on the future relationship, after only one round of negotiations, making a comprehensive deal unlikely in 2020.
- The UK is currently scheduled to exit the transition period with the EU on December 31st. Legally, this deadline can be extended by the EU and the UK by mutual agreement, but the government has set the December 31st 2020 exit date in law and has resisted attempts to amend it. The UK and EU governments had set out a timetable for negotiations that envisaged a comprehensive free-trade agreement (FTA). However, only one round of talks had been held before the UK and EU countries began to implement national lockdowns, and the chief negotiators for both the UK and the EU were forced to self-isolate after developing coronavirus symptoms, effectively stalling the talks. As a result, we no longer believe that it is possible to agree an FTA on the existing timetable.
- We expect London to retain its status as one of the world's main financial centres, especially in the trading of foreign exchange and derivatives, but a loss of influence and post-Brexit restrictions on financial services trade with

One-click report : United Kingdom ,March 21st 2024

the EU are inevitable, even in a best-case scenario. Reaching agreement on the many elements of a complex new trading arrangement will be difficult and time-consuming (taking years rather than months) and financial services firms in the UK will almost certainly face restrictions from a loss of "passporting" (the right for UK-regulated financial companies to do business in the EU and vice versa).

- A future trading and regulatory regime for financial services would most likely be based on a so-called enhanced equivalence framework, which would allow firms to retain some access to the bloc, albeit more limited in most areas than is currently the case. A problem of this approach for UK-based companies is that market access could be withdrawn unilaterally by the EU if it deemed that UK regulation had strayed too far from its standards, implying a constant degree of uncertainty.

- UK and EU regulators have agreed and implemented a number of temporary arrangements to try to reduce the potential disruption to financial markets of a disorderly "no-deal" Brexit. In the large euro-clearing market, for example, which is dominated by London-based firms, a 12-month window of "equivalence rights" will allow EU-based derivatives traders to continue using UK clearing houses and market infrastructure in the event of a no-deal Brexit. UK regulators have established a temporary permissions regime that would allow EU-based firms passporting into the UK to continue existing regulated business for a limited period after a no-deal Brexit.
- Financial services companies currently serving the EU from the UK will continue to relocate some of their operations and staff to within the bloc, so as to ensure continued passporting provisions of the single market. Although outflows from the UK of financial sector employees (and related tax revenue) have so far been fairly modest, it is likely that this trend will continue as competing financial services hubs, primarily Frankfurt and Paris, gradually increase in size and influence. European policymakers will enhance post-Brexit policy efforts to attract major financial functions away from London. In mid-2019 the European Banking Authority (EBA), the EU's regulatory agency, completed its relocation from London to Paris, in direct response to Brexit.

Healthcare

[United Kingdom](#) | [Healthcare](#) | [Spending](#)

June 30th 2020

Overview

- The UK has been hit hard by the global coronavirus (Covid-19) pandemic. Confirmed coronavirus deaths totalled 43,575 as of June 29th, second only to the US globally. The UK government imposed a lockdown in late March and began lifting it in early June, with fuller liberalisation due to start on July 4th.
- The government's aim—largely achieved so far—was to prevent the National Health Service (NHS) from being overstretched. However, by discharging patients in order to empty wards (often without testing them), the policy arguably led to rise in coronavirus cases in care homes. An ageing population, high obesity rates and London's role as a global hub also put the UK at high risk from the disease.
- In its March 2020 budget the government pledged a £5bn (US\$5.8bn) emergency response fund to help the NHS cope with the developing outbreak and the related costs of testing, staff recruitment, stockpiling and containment measures and staff recruitment. This was followed by a £350bn package to mitigate the shock to the UK economy,

One-click report : United Kingdom ,March 21st 2024

workers and households. Nevertheless, The Economist Intelligence Unit forecasts that real GDP will contract by 8.7% in 2020, concentrated in the first two quarters of the year.

^a Economist Intelligence Unit estimates. ^b Economist Intelligence Unit forecasts. ^c Actual.

Source: The Economist Intelligence Unit.

- We also expect healthcare spending to fall in real terms this year, by over 5%, reflecting the cancellation and postponement of non-coronavirus care amid the crisis. Nevertheless, healthcare's share of GDP will rise to 10.3%, up from 9.8% in 2018 (latest OECD data). This share will edge down again as the economy recovers in 2021, but

One-click report : United Kingdom ,March 21st 2024

will then rebound to reach 10.3% again in 2023-24. The share will remain lower than in Germany and France (both 11.2%), but above the OECD average of 8.8%.

- Healthcare spending will rise at a compound annual growth rate (CAGR) of 2.1% in local-currency terms (4.1% in US dollar terms) in 2020-24. This is slower than the CAGR of 3.9% estimated for the previous five years. However, our forecasts do suggest that the government will narrowly keep its legally binding pledge, made in December 2019, to increase NHS spending by £34bn by the 2023/24 (April-March) fiscal year.
- However, the UK's relatively weak public finances will become weaker still as a result of the coronavirus crisis. Brexit will also pose a challenge to the healthcare system. The UK formally left the EU at end-January 2020, entering a transition period. The "real" Brexit deadline is end-2020, when the UK is scheduled to leave the single market and customs union.
- Our core forecast is that a limited "hard Brexit" deal focused on critical sectors will be agreed by end-2020, with negotiations ongoing in other areas. However, there is a high chance that no deal will be reached by end-2020, leaving businesses to face a rise in non-tariff barriers, with likely disruption to pharmaceutical supply chains. As a result, we expect pharmaceutical sales to be even more subdued than healthcare spending over the 2020-24 period, rising at a CAGR of just 1.2% in nominal local-currency terms.

One-click report : United Kingdom ,March 21st 2024

Funding sources

- Healthcare provision in the UK is dominated by the NHS, which is financed primarily via general taxation. NHS care is free at point of delivery, but fixed charges are levied (in England) for most prescription medicines and dental care, with some exemptions.
- Public expenditure (including compulsory contributions) accounted for 77% of current health spending in 2018, according to the OECD. This share has fallen slightly over the past decade. It is lower than in Germany (85%) and France (83%), but above the OECD average (74%).

One-click report : United Kingdom ,March 21st 2024

- Devolution since 1999 means that most NHS funding and commissioning occurs under separate frameworks in the four UK nations, with clear variations in some policy areas. This has been particularly apparent during the coronavirus crisis, with the four nations following separate lockdown policies as local caseloads varied.

- The Health and Social Care Act 2012 reorganised NHS England funding flows in order to give general practitioners (GPs) control over health commissioning. Management of about 70% of funding was passed to 191

One-click report : United Kingdom ,March 21st 2024

clinical commissioning groups (CCGs). The reforms did not apply in Scotland, Wales or Northern Ireland. Several CCGs merged in April 2020, as envisaged under the NHS England long-term plan unveiled in January 2019.

- Current (operational) NHS spending increased from £126.7bn in 2018/19 to £133.3bn in 2019/20, and is planned to rise again to £137.1bn in 2020/21. Of the 2019/20 total, £115bn went to NHS England, with Scotland, Wales and Northern Ireland sharing the rest under a formula related to population size.
- The Conservative government's spending plans imply that by 2022/23 the annual budget for NHS England will have risen by £20.5bn a year in real terms, with budgets for the other three UK regions (Scotland, Wales and Northern Ireland) rising at the same rate. Capital spending, on hospitals and equipment, totalled £7.1bn in 2019/20.
- In September 2019 the government unveiled additional spending of £1.5bn in 2020/21 for social care services, which are separate from the NHS budget and fall under the remit of local authorities. This will only partly reverse a sharp real-term drop in social care spending since 2010, which has exacerbated strains on the wider healthcare system.

One-click report : United Kingdom ,March 21st 2024

Private health insurance

- Voluntary (or private) spending on healthcare accounted for 22.9% of the UK's total health expenditure in 2018, according to the OECD. Of this, out-of-pocket (OOP) spending accounted for 16% of total health spending, with 3% coming from private health insurance and the remainder from charitable or company schemes, according to government data.
- The share of OOP spending has risen gradually in recent years, but the private health insurance market has remained broadly flat, reflecting the dominance of the NHS. In 2018 spending on private acute medical care in hospitals and clinics fell by 1.1% to £5.8bn, according to LaingBuisson, a consultancy, reflecting a decline in care done under contract to the NHS. This decline came despite a 4.8% increase in the self-pay market.
- The leading independent healthcare group is Bupa, with 2.2m policyholders in 2018. Other major insurers include AXA PPP, Aviva and VitalityHealth.

Telecommunications

[United Kingdom](#) | [Telecommunications](#) | [Overview](#)

May 20th 2020

- Mobile telephony accounts for a majority of telecommunications connections in the UK. The mobile penetration rate has fallen slightly in recent years, amid a largely saturated market. The Economist Intelligence Unit expects a return to growth, albeit weak, over the forecast period (2020-24), rising to 122% by 2024. The number of mobile subscriptions is forecast to increase at a compound annual growth rate (CAGR) of 0.9%.

One-click report : United Kingdom ,March 21st 2024

- Fixed-line penetration is forecast to decline, falling gradually to 44% in 2024. There were an estimated 40 broadband subscriptions per 100 people in 2019—the eighth-highest rate in the OECD—with total internet penetration at 95.4% of the population. We forecast a rise to 42.6 broadband sub-scriptions per 100 people by 2024, with the impact of the coronavirus crisis likely to accelerate the upward trend in digital adoption. However, a pandemic-related economic slump and ongoing social distancing measures imply greater uncertainty over planned digital investment plans by telecoms firms and the government in 2020-24.
- An updated UK digital strategy was published by the government in March 2017, with seven strands covering areas such as connectivity, digital skills and cyber security. Alongside an aim (which will be unmet) to complete the roll-out of fourth-generation (4G) mobile services in 2020, the strategy detailed higher public investment to support the development of fifth-generation (5G) technology, full-fibre broadband and artificial intelligence (AI). In March 2020 the government and Ofcom, the telecoms regulator, agreed a scheme with the UK's four main mobile network operators (MNOs) for a shared rural 4G network to remove most connectivity "not-spots"—a term used to describe the absence of 4G coverage—by 2025. The digital strategy aims for a majority of the population to have 5G mobile coverage by 2027. Since mid-2019 all four main MNOs have launched commercially available 5G services.
- In July 2018 the then Conservative government set targets to achieve "full-fibre broadband coverage" for 15m premises by 2025 and national coverage by 2033. An electioneering pledge by Boris Johnson in July 2019—when he took over as prime minister—to achieve national coverage by 2025 has predictably been watered down since the UK general election in late 2019, with the re-elected Conservative administration committing only to "accelerate the delivery of gigabit-capable broadband". Full-fibre coverage in the UK is among the lowest in Europe, at about 13% in April 2020.

Intelligence that moves you forward

EIU is the research and analysis division of The Economist Group, a leading source of international business and world affairs information. It provides accurate and impartial intelligence for corporations, governments, financial institutions and academic organisations, inspiring business leaders to identify opportunities and manage risks with confidence since 1946.

Our solutions

Country analysis—access detailed economic and political analysis, data and forecasts for nearly 200 countries, as well as assessments of the business environment.

Risk analysis—identify operational and financial threats around the world and understand the implications for your business

Industry analysis—gain insight into key market trends with five-year forecasts and in-depth analysis for six industries in 70 major economies.

Custom briefings and presentations—inform your strategy, develop executive knowledge and engage audiences. Our team is available to book for boardroom briefings, conferences and other professional events.
