## Briefing sheet

[United Kingdom](#) | [Summary](#) | [Briefing sheet](#)

May 1st 2022

### Political and economic outlook

- The UK economy is the fifth largest in the world. Services make up more than 40% of total exports and 80% of GDP. Having left the EU single market and customs union, the UK is seeking to rebalance trading relations towards markets outside the EU.
- In the December 2019 general election the Conservative Party, under the prime minister, Boris Johnson, won an 80-seat majority on a platform of greater investment. EIU expects the government to remain in place until the next election, scheduled for 2024, although ongoing political scandals may prompt a leadership challenge.
- Low investment and productivity have held back UK growth for decades. The government is providing substantial tax incentives to stimulate private investment and has promised to increase public investment levels. However, tax and national insurance increases, as well as trade frictions, will be a countervailing drag on growth.
- A firm rebound left the UK 0.4% below its 2019 level at end-2021—the fourth highest among the G7 group of advanced economies. In 2022 GDP growth will be hampered by the impact of the Russia-Ukraine conflict (with higher inflation eroding private consumption), but a slow drawdown of savings will provide some support.

## One-click report : United Kingdom ,March 21st 2024

- The new trade agreement between the UK and the EU leaves many aspects of the relationship unsettled. It creates notable non-tariff barriers and has led to serious dissatisfaction in Northern Ireland, which will remain a source of friction.
- The UK is one of eight European countries with a public debt/GDP ratio above 100%. Its ability to borrow in its own currency and long average debt maturity will keep borrowing costs manageable, but fiscal consolidation is likely during the forecast period.
- The invasion of Ukraine by Russia and the ongoing conflict will negatively affect the UK economy. Higher gas prices throughout Europe will fuel energy price inflation, and Russian investment in the UK property sector will also be curtailed by sanctions.

### Market opportunities

## One-click report : United Kingdom ,March 21st 2024

---

### Key changes since April 4th

- Inflation rose by 0.9% month on month in March, taking quarterly growth to 1.7%. We have raised our inflation forecast for 2022 from 6.4% to 6.7%. Inflation is likely to peak in April owing to rises in national insurance contributions and the household energy price cap.
- Police have issued Mr Johnson with a fixed penalty notice in relation to his attendance at parties during lockdowns. We expect that in the coming weeks he will receive further fines in relation to other events held at his office and residence.
- The Ukraine conflict and political setbacks suffered by Mr Johnson's political rivals reduce the risk of an immediate leadership challenge. However, forthcoming elections and a parliamentary investigation into his conduct mean that his position is not yet secure.

### The month ahead

- May 4th—Local elections: The Conservative Party is likely to lose seats in the local elections, although the number will be limited by the party's poor performance in these seats in 2018. In Northern Ireland, the Democratic Unionist Party is likely to lose its status as the largest party, sparking an extended period without a functioning executive.
- May 5th—Bank of England monetary policy decision: We expect the Bank of England (the central bank) to raise its policy rate by a further 25 basis points, to 1%, amid increased cost-of-living concerns. This will be the fourth consecutive rate increase, after which we expect the pace of tightening to slow as energy prices stabilise at a high level.

## One-click report : United Kingdom ,March 21st 2024

---

- May 12th—GDP (Q1): Preliminary GDP data show 0.8% monthly growth in January as the economy rebounded from the Omicron-fuelled coronavirus wave, with a further increase of 0.1% in February. We expect March growth to be poor amid a more acute cost-of-living crisis and weakening consumer and business confidence.

### Major risks to our forecast

Scenarios, Q1 2022	Probability	Impact	Intensity
Supply-chain disruptions worsen in 2022, damaging economic activity	Very high	High	20
Aggressive rises in interest rates by the Bank of England in response to inflation produce a "stagflation" crisis	High	High	16
High energy prices push the UK electricity market into crisis	High	High	16
Further tax increases stifle the UK economy	Very high	Moderate	15
The UK is struck by another major cyber-attack	Very high	Moderate	15

Note. Scenarios and scores are taken from our Risk Briefing product. Risk scenarios are potential developments that might substantially change the business operating environment over the coming two years. Risk intensity is a product of probability and impact, on a 25-point scale.

## Political stability

[United Kingdom](#) | [Politics](#) | [Forecast](#) | [Political stability](#)

May 1st 2022

The government led by the Conservative prime minister, Boris Johnson, faces a number of significant challenges. They include managing the combination of high inflation and weakened public finances, which have arisen as a consequence of stresses from pandemic-related disruptions in 2020-21; new trade barriers with the EU; and energy price spikes following Russia's invasion of Ukraine. In addition, the Conservative Party is suffering from ongoing low approval ratings, following increasing cost-of-living concerns and revelations of parties held at the prime minister's residence and office during lockdowns, when they were illegal. These events are being investigated by the police; Mr Johnson has thus far received one fixed penalty notice (he is the first sitting prime minister to have received a criminal penalty), and more fines are likely in the future as investigations into other parties are ongoing. Parliament has also launched an official inquiry into whether he misled the House of Commons (the lower house) over his involvement in these parties.

This scandal has weakened Mr Johnson's standing, limiting his ability to make unpopular decisions. Mr Johnson benefits from the fact that there is no obvious successor within the Conservative Party, and Russia's invasion of Ukraine has decreased the salience of the scandals and limited the willingness of members of parliament (MPs) to call for his resignation in the immediate term. However, EIU believes that there is a high risk that he will face a vote of confidence so long as his polling remains low and further scandals are possible. His political weakness will

## One-click report : United Kingdom ,March 21st 2024

---

exacerbate the party's existing ideological divisions between members who favour a larger state and increased investment and those who favour a smaller state and less government spending. The prime minister belongs to the first camp whereas the second probably represents the views of more party members and MPs, in particular the chancellor of the exchequer, Rishi Sunak, which will lead to conflict.

There are medium-term risks to the UK's integrity, but the dissolution of the union is not our core forecast for 2022-26. Pro-independence parties, led by the Scottish National Party (SNP), hold a majority in the Scottish parliament and made minor gains in the 2021 local elections while favouring a second independence referendum (the first was in 2014). The government has dismissed the possibility of granting a second referendum during this parliamentary term. Even if it were forced to grant one by a court order, the poll would take several years to organise. Opinion polling on Scottish independence has generally shown a consistent, if narrow, lead for remaining in the union, except during a period in 2020 when the devolved government's pandemic-related public health powers were abnormally visible to voters. Therefore we do not expect Scotland to achieve independence in 2022-26.

Brexit has inflamed tensions in Northern Ireland, which remains within a regulatory union with the EU for most goods to avoid border checks on the island of Ireland. This requires checks between Northern Ireland and the rest of the UK for all goods deemed by a UK-EU joint committee to be "at risk" of pass-ing into the EU. This arrangement has been difficult to implement and is disliked by Unionist politicians in Northern Ireland for, in effect, creating a border between Northern Ireland and the rest of the UK. The Unionist first minister of Northern Ireland resigned on February 3rd to protest against the Northern Ireland protocol, in effect disempowering the Northern Irish devolved government and further raising political tensions. The local elections are likely to result in a Nationalist first minister for the first time, owing to fragmentation within the Unionist community, which will probably lead to the Unionists refusing to support a new functioning Northern Irish executive, exacerbating political unrest.

## Election watch

[United Kingdom](#) | [Politics](#) | [Forecast](#) | [Election watch](#)

May 1st 2022

The most likely date for the next general election is May 2nd 2024. Parliament must be dissolved within five years of the previous election (December 12th 2019) with an election to follow within 25 days. However, elections are usually held in the spring or summer, usually in May to coincide with local elections, and autumn or winter elections are rare. UK governments often call early elections in the penultimate year of a parliament to consolidate their gains, but this is unlikely unless the Conservatives' polling improves dramatically.

The Conservatives held a 20-point lead over the opposition Labour Party in spring 2021, during the early success of the coronavirus vaccination campaign. However, the rising cost of living and reports that the prime minister attended parties during lockdowns have led to Labour leading the Conservatives in the polls since December 2021. Polling is currently volatile and will probably shift depending on whether more scandals come to light, and the overall impact of higher inflation on households. The dominance of the SNP in Scottish seats will mean that it is increasingly difficult for any one party to achieve an overall majority, making a hung parliament the most likely outcome, unless polling changes significantly.

## International relations

[United Kingdom](#) | [Politics](#) | [Forecast](#) | [International relations](#)

May 1st 2022

Following Russia's invasion of Ukraine on February 24th, all countries in Europe have adopted severe sanctions against Russia, preventing the Central Bank of Russia from accessing international reserves, cutting Russian banks from the SWIFT international bank messaging system and severely curtailing most non-energy trade with Russia. The UK is currently bringing forward legislation to provide greater scrutiny of foreign ownership of UK assets.

Although there have been greater signs of unity between the UK and the EU in response to the Ukraine conflict, underlying sources of tension related to the UK's departure from the EU remain. The EU-UK Trade and Co-operation Agreement came into force on January 1st 2021. It provides for zero-tariff, zero-quota trade between the UK and the EU, at least in the first instance. However, leaving the single market and customs union has created a variety of non-tariff trade barriers in the form of border checks and product certifications. The agreement also provides a mechanism whereby if the divergence in regulations on labour, the environment or state aid becomes sufficiently great, the other side can implement retaliatory tariffs to compensate, subject to an arbitration period. The regulatory and tariff regimes may, therefore, drift apart over time.

The Northern Ireland protocol will remain a source of UK-EU friction. The UK has extended the grace periods on internal checks between Northern Ireland and the rest of the country for an indefinite period. UK negotiators have proposed scrapping large parts of the protocol to reduce trade blockages and political tensions in Northern Ireland, and have mooted triggering an emergency override provision enshrined in Article 16 of the protocol owing to the risk of violence. The government has not invoked Article 16, although it reserves the right to. It has proposed a bill giving it domestic powers to do so, potentially to be voted upon later in 2022. The EU has offered limited concessions on

## One-click report : United Kingdom ,March 21st 2024

---

how the protocol is to be implemented, and negotiations are ongoing. However, the EU has said that it would apply substantial trade penalties against the UK if Article 16 were invoked, arguing that the current difficulties were foreseeable when the protocol was agreed. The risk of provoking a trade war amid the existing cost-of-living crisis means that we do not expect the UK to invoke Article 16. However, a UK-EU trade war remains a risk. Meanwhile, checks on goods travelling to Northern Ireland are likely to remain unenforced.

## Policy trends

[United Kingdom](#) | [Economy](#) | [Forecast](#) | [Policy trends](#)

May 1st 2022

For decades the UK has faced substantial economic policy challenges, including low public investment, wide regional disparities, high housing costs and chronically low productivity growth. The Conservatives' 2019 election manifesto promised greater public-sector investment (including in green energy and infrastructure) and additional current spending on the National Health Service (NHS), education and the police, as well as to address the issue of long-term social care. The pandemic led to a massive increase in state spending, but managing that emergency, along with ongoing divisions within the party, has delayed a more comprehensive investment programme.

In 2021 the government enacted a two-year tax "super-deduction", which allows companies to write off tax up to 130% of the value of their capital investment in 2021-23, as well as public investment, led by efforts to "level up" deprived regions outside London and the south-east in an attempt to boost private investment. This was based on the assumption that firmer underlying economic growth and stronger business sentiment would provide the fiscal resources to lift investment. However, Russia's invasion of Ukraine has prompted a sharp rise in global commodity prices, which is lifting inflation, dampening growth, undermining investor confidence and aggravating cost-of-living

## One-click report : United Kingdom ,March 21st 2024

---

concerns. The government has thus far enacted fairly minor measures to increase support to households, but further-reaching measures to cushion the impact of higher utility prices are likely later in 2022. Efforts to lift public investment thereafter will flounder: in 2023 there will be only one year until the next election, and the government is likely to use the time on shorter-term stimulus, rather than longer-term investment.

## Fiscal policy

[United Kingdom](#) | [Economy](#) | [Forecast](#) | [Fiscal policy outlook](#)

May 1st 2022

The pandemic triggered massive expansion of fiscal support for workers and businesses. These initiatives were mostly phased out by October 2021, although their fiscal impact has been marked. The budget recorded a deficit of 8.4% of GDP in 2021, with the debt/GDP ratio reaching an estimated 102.8%.

The government has committed to fiscal consolidation, and in September 2021 announced that it planned to increase the corporation-tax rate from 19% to 25% in 2023 and national insurance contributions by 2.5 percentage points to fund additional health and social-care spending. Despite the cost-of-living crisis, in his recent spring statement Mr Sunak maintained plans to lift national insurance contributions and corporation tax, making only minor concessions to households (including a cut in fuel duty), but more comprehensive measures are likely in the autumn. Government revenue has increased as rising inflation increases the nominal tax take and moves more households into higher income-tax bands; the government has not allocated about half of this, with a view to using it to fund extra measures later in 2022, or to provide tax relief in advance of the 2024 election.

We forecast that expenditure as a share of GDP will decline over the forecast period, although much of this will be due to the withdrawal of pandemic-related spending. Coupled with rising revenue, this means that the fiscal deficit

## One-click report : United Kingdom ,March 21st 2024

---

will decline gradually from 5.3% of GDP in 2022 to 3.3% of GDP in 2026. We expect the debt/GDP ratio to edge down slightly, from 101% in 2022 to 99.1% in 2026.

## Monetary policy

[United Kingdom](#) | [Economy](#) | [Forecast](#) | [Monetary policy outlook](#)

May 1st 2022

On March 17th the Bank of England (BoE, the central bank) raised its key interest rate by 25 basis points, to 0.75%, following similar increases at its previous two meetings, back to its pre-pandemic level. The tone from the BoE's statement was considerably more dovish than previously, as it expects the inflationary shock emanating from the war in Ukraine to impart a "materially larger" squeeze on household incomes. Another modest rise, to 1%, is likely in May, but given the weaker growth outlook and a partial reversal of the BoE's quantitative easing (QE) programme, there is a good chance that the central bank could then pause its tightening cycle as it assesses the fallout from the Ukraine crisis. We expect at least one more interest-rate rise from 2023, and a winding down of QE, but the latter is not expected to be completed until late 2023 (at the earliest). The policy interest rate is forecast to end 2026 at 2.25%.

## Economic growth

[United Kingdom](#) | [Economy](#) | [Forecast](#) | [Economic growth](#)

May 1st 2022

The economic fallout from the Russia-Ukraine war has weakened our near-term outlook. Surging inflation, supply-chain disruption, commodity price increases and scheduled domestic tax rises will all undermine the pace of growth. The main impact will be felt as a result of higher global commodity prices, with rising inflation eroding disposable incomes and prompting more moderate growth in private consumption. Continued supply shortages and rising overheads will also increase caution among businesses, leading to a slowdown in fixed investment growth. The introduction of new trade barriers after Brexit has exacerbated supply shocks affecting countries across western Europe (owing to the invasion and the ongoing coronavirus-related lockdowns in Asia), making the UK particularly vulnerable to bouts of trade-related disruption. We forecast that real GDP will grow by 3.9% in 2022, but this still partly reflects a bounce-back from the coronavirus-induced contraction (the headline figure is flattered by year-on-year comparisons with the 2021 base year, when many lockdown restrictions were still in place).

In the medium term the pace of growth will slow, with real GDP growth forecast to average 1.7% in 2023-26. Private consumption will be supported by the drawdown of household savings, which reached the equivalent of 14% of income in 2020 (far above the 2010-19 average of 7.9%, or the 2019 level of 4.7%) and remained elevated in 2021.

## One-click report : United Kingdom ,March 21st 2024

Significant unwinding is likely, as households eat into savings to address cost-of-living issues. The UK has one of the most flexible labour markets in Europe, and we expect unemployment to tick up to 4% in 2023, before edging back down to 3.8% by 2026.

### Economic growth

%	2021 <sup>a</sup>	2022 <sup>b</sup>	2023 <sup>b</sup>	2024 <sup>b</sup>	2025 <sup>b</sup>	2026 <sup>b</sup>

<sup>a</sup> Actual. <sup>b</sup> EIU forecasts.

## Inflation

[United Kingdom](#) | [Economy](#) | [Forecast](#) | [Inflation](#)

May 1st 2022

The reopening of the economy caused a sharp spike in inflation in 2021, owing to increased consumer spending and supply-chain disruptions in the domestic market and internationally. The UK is also particularly dependent on natural gas, and a marked increase in gas prices from mid-2021 has dramatically driven up electricity prices, an important component of the consumer prices index. We expect these price pressures to increase in 2022, following the Russian invasion of Ukraine, driving up full-year average inflation from 2.5% in 2021 to 6.7%. From 2023 inflation will slow to a more modest rate as energy markets begin to stabilise, declining to 1.9% by 2026.

## Exchange rates

[United Kingdom](#) | [Economy](#) | [Forecast](#) | [Exchange rates](#)

May 1st 2022

After a period of appreciation against the US dollar as the BoE began monetary tightening (with sterling strengthening from US\$1.32:£1 in December to US\$1.36:£1 in mid-February), sterling weakened to US\$1.27:£1 in late April as the Federal Reserve (the US central bank) began its own tightening cycle and the war in Ukraine prompted a "flight to safety" among investors. We expect sterling to remain weak against the dollar for the remainder of 2022, and from 2023 to strengthen again as inflation ebbs and the flight to safety abates. We expect some appreciation against the euro in 2022, based on our current forecast that the European Central Bank holds off from

## One-click report : United Kingdom ,March 21st 2024

---

beginning its own tightening cycle until 2023. We expect that sterling will remain relatively steady against the euro in 2024-26, and that both currencies will appreciate gradually against the dollar, reaching US\$1.49:£1 at end-2026.

## External sector

[United Kingdom](#) | [Economy](#) | [Forecast](#) | [External sector](#)

May 1st 2022

The UK has been among the worst-hit countries in Europe by supply-chain disruptions. In the context of the Ukraine conflict, ongoing disruptions will continue to depress exports and imports. We expect Brexit to drag on imports and exports over the medium term (relative to if the UK had remained in the EU), but we expect a return to overall export growth in 2022-23 as global markets unlock and UK exporters adapt to new trading rules.

The UK has run a persistent current-account deficit since 1985. After widening in 2021, we expect the deficit to increase further in 2022 (to 3.2% of GDP), before narrowing to 3% of GDP in 2024, and increasing again in 2025-26. Sanctions on Russia are likely to have a minor influence on the UK external balance—aside from movements of gold in financial transactions, the UK's primary import from Russia is petroleum products, and its exports to Russia are minimal as a percentage of total exports.

May 16th 2022

Value of index <sup>a</sup>		Global rank <sup>b</sup>		Regional rank <sup>c</sup>	
2017-21	2022-26	2017-21	2022-26	2017-21	2022-26
7.81	7.64	15	23	9	11

<sup>a</sup> Out of 10. <sup>b</sup> Out of 82 countries. <sup>c</sup> Out of 18 countries: Austria, Belgium, Cyprus, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey and the UK.

- The UK's score in the business environment rankings for the forecast period (2022-26) falls compared with the historical period (2017-21). The UK's regional ranking falls by two places and the country's global ranking is 23rd. The macroeconomic environment will weaken on the back of increased trade barriers between the UK and the rest of Europe, a higher tax burden and labour shortages. However the UK's traditional strengths—a pro-business policy orientation, a low burden of regulation, and developed product and services markets—will partly offset the deterioration in other areas. Structural deficits, such as weak productivity and inadequate intermediate skills, will persist.

## Business environment at a glance

[United Kingdom](#) | [Business](#) | [Business environment](#) | [Business environment at a glance](#)

May 16th 2022

### Policy towards private enterprise and competition

2022-23: Final coronavirus-related support is phased out. A 130% "super-deduction" on capital investment is in place.

2024-26: Elevated state intervention in investment and innovation continues. New state-aid rules are implemented.

### Policy towards foreign investment

2022-23: Continued openness to investment, but increased scrutiny in sectors considered sensitive to national security. Crackdown on Russian investment and money-laundering through the property sector.

2024-26: Infrastructure plans offer investment opportunities. Possible changes in tax policies to bolster inward investment.

### Foreign trade and exchange controls

2022-23: Increased trade barriers with EU. Negotiations over Northern Ireland protocol. Supply-chain disruptions persist. Sanctions imposed on Russian exports.

2024-26: Continued UK-EU negotiations probable. New trade agreements with other countries, including potential accession to Comprehensive and Progressive Agreement for Trans-Pacific Partnership (CPTPP) trade bloc.

## One-click report : United Kingdom ,March 21st 2024

---

### Taxes

2022-23: Corporation tax increases from 19% to 25% and national-insurance contributions by 2.5 percentage points.

2024-26: Additional tax rises likely to fund public spending, investment and social care.

### Financing

2022-23: Monetary policy tightening, with Bank of England (central bank) raising interest rates. Loss of "passporting" rights and restrictions on EU services trade. Slow progress in establishing equivalence with EU.

2024-26: Modest decline in City of London's status. Steady growth in alternative forms of debt financing.

### The labour market

2022-23: Labour market remains tight. Pandemic-related departure of expatriates and sharp drop in immigration from EU due to the end to free movement of labour. Shortages in low-skilled occupations continue.

2024-26: Increased immigration from Hong Kong. Addition of more low-wage sectors to shortage lists.

### Infrastructure

2022-23: Modest rise in spending on housing, roads and digital infrastructure. Crossrail service in London begins operation in 2022.

2024-26: Increased infrastructure investment, emphasis on "levelling up" regional infrastructure and competitiveness.

## One-click report : United Kingdom ,March 21st 2024

### Technological readiness

2022-23: High e-commerce penetration and strong research base, but spending on research and development (R&D) remains below EU average. Continued high threat from cybercrime and cyber-espionage.

2024-26: Modest rise in public R&D spending. Development of state "blue skies" fund.

## Global position

[United Kingdom](#) | [Regulation](#) | [Global position](#)

December 1st 2021

The outlook for the UK has become much more uncertain following the 2016 referendum vote to leave the EU. The UK departed the bloc on January 31st 2020, entering a transition period that lasted until end-2020, during which the UK retained most aspects of EU membership. An EU-UK Trade and Co-operation Agreement (TCA) came into force on January 1st 2021. It provides for zero-tariff, zero-quota trade between the UK and the EU. However, leaving the EU single market and customs union has created a variety of nontariff trade barriers. The TCA also leaves many aspects of the relationship between the UK and the 27-member bloc unsettled. The coronavirus (Covid-19) pandemic has compounded an already uncertain outlook during 2020 and 2021. Lockdowns and travel restrictions have delivered a severe blow to industries such as hospitality, tourism and aviation, as well as parts of the retail sector. The UK still

## One-click report : United Kingdom ,March 21st 2024

has much to offer as an investment destination. Existing clusters and economies of scale in sectors such as pharmaceuticals, biotechnology, software development and financial services will remain powerful magnets for foreign entrants, while significant potential exists for large-scale, long-term investments in the energy, communications and transport sectors.

## Regulatory/market assessment

[United Kingdom](#) | [Regulation](#) | [Regulatory/market assessment](#)

December 1st 2021

- The National Security and Investment Act passed into law in April 2021 and comes fully into force from January 4th 2022. The act makes it mandatory for investors (domestic and foreign) in 17 sectors to notify the government in

## One-click report : United Kingdom ,March 21st 2024

---

advance of any transaction, regardless of size, that might give rise to UK national security risks. The implicated sectors include defence, energy, transport and communications.

- In October 2021 the government unveiled a “net zero” strategy, outlining how the UK will meet its target to effectively eliminate green-house gas emissions by 2050. The following month, while the UK was hosting the UN’s COP26 climate talks, lawmakers approved a new Environmental Act that replaces EU legislation and oversight following the UK’s departure from the bloc.
- Citizens of the European Economic Area (the EU, plus Iceland, Liechtenstein and Norway) and Switzerland became subject to UK immigration controls from January 1st 2021. A new points-based immigration system now treats EU and non-EU citizens equally.
- In March 2021 the UK government repealed legislation implementing the EU’s directive on the taxation of interest and royalty payments. Companies now must rely on arrangements set out in bilateral tax treaties with individual EU member states, which in many cases eliminate withholding tax.
- The EU-UK Trade and Co-operation Agreement came into force in January 2021, outlining the initial terms of trade relations following the UK’s departure from the EU. The agreement provides for zero-tariff, zero-quota trade between the UK and the EU, at least in the first instance. However, leaving the single market and customs union have created a variety of nontariff trade barriers in the form of border checks and product certifications.

## Regulatory/market watch

[United Kingdom](#) | [Regulation](#) | [Regulatory/market watch](#)

December 1st 2021

- After lifting most coronavirus (Covid-19) restrictions in mid-2021, the government introduced additional measures in early December 2021 following the emergence of the new Omicron variant. The provisions, which fall well short of the full lockdowns from earlier in the pandemic, include orders to work from home, wear face masks in public spaces and use vaccine passes.
- The government launched its coronavirus vaccination programme in December 2020, and nearly 70% of the UK population was fully vaccinated by end-November 2021. The government is encouraging uptake of booster shots following the emergence of Omicron, with just under 28% of the population having received the additional dose.
- The government has wound down most of the relief mechanisms it put in place to support workers and businesses during the pandemic, including the Coronavirus Job Retention Scheme, which expired in September 2021. A Kickstart scheme remains active; it funds new job placements for young people aged 16–24 and pays 100% of the national minimum wage for 25 hours per week for six months.
- A UK Shared Prosperity Fund is expected to launch in April 2022, with annual spending of around £1.5bn. It will replace the previous EU development funding schemes and will focus on regional development and employment support.
- The corporate income tax rate will increase from 19% to 25% in April 2023, according to an announcement by the government in March 2021. The higher rate will apply to companies with annual profits exceeding £250,000.

## One-click report : United Kingdom ,March 21st 2024

- At least in the short term, EIU does not expect the UK to trigger Article 16 of the Northern Ireland protocol, which would override that agreement. However, tensions remain high and a UK-EU trade war remains a notable risk. Checks between the UK and EU are likely to remain unenforced in the meantime as negotiations continue on a less invasive system.
- The government has said it will remove its 2% digital services tax once the OECD's new arrangement on global corporate tax takes effect. The agreement, which was finalised in October 2021, is meant to come into force by 2023 but could be derailed if the US fails to ratify it.

## Long-term outlook: The long-term outlook

[United Kingdom](#) | [Economy](#) | [Long-term outlook](#) | [Long-term outlook](#)

May 16th 2022

	2022-30	2031-50	2022-50
<b>Population and labour force (% change; annual av)</b>			
Total population	0.37	0.25	0.29
Working-age population	0.08	0.01	0.03
Working-age minus total population	-0.29	-0.24	-0.25
Labour force	0.40	0.16	0.24
<b>Growth and productivity (% change; annual av)</b>			
Growth of real GDP per head	1.6	1.4	1.5
Growth of real GDP	2.0	1.7	1.8

<https://viewpoint.eiu.com>

©Economist Intelligence Unit Limited 2023

## One-click report : United Kingdom ,March 21st 2024

---

Labour productivity growth	1.5	1.5	1.5
Growth of capital stock	3.2	2.7	2.8
Total factor productivity growth	0.4	0.6	0.6

Initial conditions: From the early 1990s to 2019, with the exception of the 2008 crisis period, the economic performance of the UK improved relative to that of many regional peers, owing in part to a sharp rise in labour utilisation, with strong employment growth fuelling strong overall expansion. The pace of economic growth began to soften in 2019, and the economy contracted sharply in 2020 amid the coronavirus pandemic. A firm rebound left the UK 0.4% below its 2019 level. Prospects for 2022-23 are weak as private consumption is hit by soaring inflation, corporates face rising debt from the coronavirus crisis (hampering investment), and trade frictions from Brexit and supply-chain disruption depress export-oriented industries. Despite securing the Trade and Co-operation Agreement with the EU, the UK's relationship with the bloc remains unsettled. The UK is likely to diverge in some areas of regulation, particularly in technology and life sciences, while non-tariff barriers put UK firms at a competitive disadvantage within the single market.

The UK's prospects for growth in the medium term will be highly dependent on government policy formulation in response to these challenges. Both major parties have signalled a willingness to pursue a more interventionist strategy in the economy and provide more public investment, in an effort to address the UK's regional inequality and weak productivity growth. The current government has increased its threshold for borrowing for investment from 2% of GDP to 3%, established a national infrastructure bank in addition to the pre-existing British Business Bank, and invested £800m (US\$1.1bn) into a "blue skies" fund to support innovative research.

The UK's structural advantages have traditionally included a comparatively low regulatory burden, a flexible labour market and a business environment that is conducive to foreign investment, which we expect to persist. On the negative side, factors that tend to constrain the UK's long-term outlook include an over-reliance on wealth effects

## One-click report : United Kingdom ,March 21st 2024

---

generated by the volatile financial and real estate sectors, high levels of private-sector debt and a deficit in "intermediate" labour market skills, which are skewed by significant geographical inequalities. These have contributed to the development of an unbalanced economy. Levels of productivity in the UK, in terms of output per hour worked, lag well behind those in the US, Germany and France. This weak trend is worrying and will weigh on medium- and long-term growth if not reversed, as well as playing an increasing role in policy debates.

Demographic trends: The working-age population is forecast to rise gradually over the long-term horizon, and the share of the population aged 65 or over will continue to increase. We forecast that by 2050 those aged 65 or older will account for 25.4% of the population (up from 18.7% in 2018). The share of the working-age population peaked at 66% in 2008-09, and we forecast a steady decline to 58.3% by 2050. The labour force participation rate stands at just over 78%—higher than the OECD average. We expect migration to continue to provide a key source of population and human capital growth. Most countries that operate skills-based immigration systems adjust their requirements periodically, a trend that we expect the UK to follow.

### **The EU is set to remain a key export destination**

External conditions: The UK is a highly trade-dependent economy, and thus its departure from the world's largest trading bloc will have implications for its long-term prospects. Despite the UK leaving the single market, the EU is likely to remain the UK's most important export destination, particularly for goods trade, given its proximity and the volume of existing trade. Although the UK's departure from the EU will allow the UK to negotiate trade deals with third countries, the total estimated value of trade deals under negotiation will not make up for the loss of access to the EU market.

The UK is likely to maintain its surplus in services, which is expected to grow as a percentage of total trade value over the course of our long-term forecast period as e-commerce and trade in intangible goods become more prominent globally.

## One-click report : United Kingdom ,March 21st 2024

---

**Institutions and policy trends:** The UK is a long-established democracy with well-entrenched rule of law (guaranteeing security of contracts), liberalised product markets and a rigorous competition policy regime. Much of the UK's policy around competition, trade, product regulation and other areas of economic policymaking had been informed by its EU membership, as was the governance of its own internal market, much of which is currently being repatriated to domestic equivalent authorities. It remains too early to gauge how effectively policymakers and institutions will manage these competencies on a national level, and whether any benefits can be realised from regaining direct control.

**Long-term performance:** Since the 2008 financial crisis the UK has suffered from chronically low productivity growth relative to its OECD peer countries, and relied heavily on moving people into work. The UK's ability to increase its productivity will be the determining factor behind long-term growth potential. A number of factors have been cited as possible causes for the UK's persistent productivity gap with its peers. These include a high degree of centralisation of the economy around the capital, London; the UK's relatively low share of spending on research and development (R&D); the dominance of the volatile financial services sector; and reliance on low-skilled immigration. Successive governments have tried to address the productivity issue, including the current government, which has committed to an increase in public investment to stimulate R&D, a shift in emphasis towards skilled immigration and

## One-click report : United Kingdom ,March 21st 2024

supporting investment outside London. Whether these plans will boost productivity remains highly uncertain. We forecast that real GDP will grow by an annual average of 2% in 2022-30, and moderate to 1.7% in 2031-50.

### Income and market size

## Automotive

[United Kingdom](#) | [Automotive](#) | [Overview](#)

April 21st 2022

- The UK's automotive sector is seeing a decline in trend. New-car sales, production and exports have fallen steadily since 2016, reflecting the damaging effects of Brexit on trade and the wider economy, as well as structural global factors linked to overcapacity and environmental pressures. In addition, since 2020 the covid-19 pandemic has caused major disruption to supply chains, while curbing vehicle output and consumer demand. A modest recovery in activity, anticipated in 2022, amid easing virus concerns, will be delayed by the fallout from the Russia-Ukraine war. The war will exacerbate supply-side frictions, material shortages, already high energy costs and other inflationary pressures.
- New-car sales dropped by 29.4% in 2020 (the fourth consecutive annual decline), to 1.63m units, the lowest level since 1992. Sales remained constrained in 2021, rising by just 1%, to an estimated 1.65m—compared with a recent peak of 2.7m in 2016 and an annual average of 2.3m in 2010-19.
- New commercial vehicle (CV) sales fell by 29.6% in 2020, to a seven-year low of 300,400 units. In contrast to the new-car market, CV sales rebounded firmly in 2021 (by 33.1%), supported by expanding online and logistics sectors. Annual sales were 6.3% below their 2019 level.
- In 2021 the UK was the world's 18th-largest automotive producer (and sixth-largest in Europe), according to the International Organisation of Motor Vehicle Manufacturers. Vehicle production expanded steadily in 2010-16, but has since fallen sharply, declining for five successive years. Following a drop of 8% in 2018 and 14% in 2019, output slumped by 29% in 2020 and another 5% in 2021, with annual production of 933,172 units, the lowest in 40 years and just half the level of 2016.

## One-click report : United Kingdom ,March 21st 2024

---

- New-car sales and vehicle production declined over the first quarter of 2022 (sales in March, traditionally the busiest month, were the weakest since 1998). Near-term prospects are weak, given renewed supply-chain disruptions owing to the Russia-Ukraine war and a renewed coronavirus wave in Asia, and with UK households in 2022 expected to experience the largest annual real-term hit to disposable incomes in more than 60 years as a result of soaring energy costs, high inflation and tax increases.
- EIU forecasts growth in new-car sales of 1.7% in 2022, with a firmer recovery from the pandemic-driven slump in 2023-24, assuming a gradual easing of supply bottlenecks and inflationary pressures and no major new coronavirus shocks. A stronger recovery has been impeded by the knock-on effects of the Russia-Ukraine war on commodity markets (not only energy, but also critical components in vehicle and battery production, such as nickel, cobalt and aluminium), global supply chains and consumer sentiment.
- Over our five-year forecast period (2022-26), new-car sales are projected to rise at a compound annual growth rate (CAGR) of 4.6%—inflated by the weak base level in 2021. We expect annual sales to stabilise below their 2010-19 trend. The share of chargeable electric vehicles (EVs) will continue to rise (from 18.5% of new-car sales in 2021), but significantly wider take-up will be constrained by affordability issues, weak incentives and limited charging infrastructure.
- The UK left the EU single market and customs union in January 2021, having agreed a limited Trade and Co-operation Agreement (TCA) with the EU. This averted the imposition of immediate tariffs and allowed for quota-free trade, but it represented a "hard Brexit" with new trade frictions, new non-tariff barriers and disruption to integrated global supply chains (already under strain from the pandemic). Full customs controls took effect from January 2022, implying tighter import restrictions. TCA provisions, including phased "rules of origin" restrictions, could lead to the imposition of export tariffs in the future.
- The UK has five mass producers of vehicles (all foreign-owned) that have primarily used the country as an export base to the EU. Challenges posed by structurally weakened trade and investment links as a result of Brexit will be

## One-click report : United Kingdom ,March 21st 2024

---

amplified by the prolonged disruptive effects to supply chains from the pandemic and the war in Ukraine. Recent state-subsidised EV-related investments have safeguarded the near-term future of plants operated by Nissan (Japan) and Vauxhall (owned by Netherlands-based Stellantis), but risks of a downsizing of the UK's automotive industry will persist in the next five years. A key influencing factor will be the UK's ability to attract new EV battery production facilities (gigafactories) in the face of strong competition from more-established hubs elsewhere in Europe, such as Germany, Hungary and Sweden.

## Consumer goods

[United Kingdom](#) | [Consumer goods](#) | [Overview](#)

May 17th 2022

- The UK's large consumer sector has faced considerable headwinds in recent years, amid subdued household demand and major disruption to business supply chains from an economically damaging Brexit process and the global pandemic. The near-term outlook is weak, with a significant real-term squeeze on household incomes in 2022 from soaring energy costs (amplified by the Russia-Ukraine war), high inflation, domestic tax rises and higher interest rates. Consumer sentiment has slumped close to historical lows, and there is a high risk of the economy falling into recession in the near term.
- Following an initial pandemic-driven slump, retail sales were fairly resilient in 2020-21, reflecting strong growth in online spending, extensive fiscal support and a shift in consumption from services to retail goods (amid movement restrictions). However, underlying demand has weakened since mid-2021, and EIU expects volume sales to fall in 2022, amid a decline in real disposable income of households and a shift back to spending on services. We forecast modest average growth of 1% per year in 2023-26 in volume terms. In value terms retail sales will be boosted by

## One-click report : United Kingdom ,March 21st 2024

higher inflation, but retail margins will face pressure from higher energy, transport, storage, commodity, labour and other input costs.

- The UK will remain Europe's largest online retail market. Robust internet sales have gone hand in hand with falls in retail employment and the number of retail stores, mostly in town centres (traditional department stores and shopping centres have been a notable casualty). The pandemic has accelerated the shift in consumer behaviour towards online and convenience channels, which will drive growth of more cashier-free and 24-hour stores, click-and-collect services and rapid-delivery start-ups. Online sellers will continue to thrive, despite increased regulatory scrutiny and plans for new e-commerce taxation. In the forecast period (2022-26) online grocery retail will be the fastest-growing segment of the e-commerce market; the absence of movement restrictions will bring shoppers back to high streets for non-food purchases.
- The retail sector accounts for about 6% of the UK economy's gross value added. It employs about 2.9m people, of which a significant proportion work part-time. A consequence of Brexit, the pandemic and this year's cost-of-living crunch will exacerbate relatively large existing inequalities across the UK, sustaining more polarised demand in the discount and luxury channels.

<sup>a</sup> Actual. <sup>b</sup> EIU estimates. <sup>c</sup> EIU forecasts.

Sources: Edge by Ascential; EIU.

- The UK left the EU single market and customs union on January 1st 2021, after finalising a Trade and Co-operation Agreement (TCA) with the EU. The TCA averted a no-deal fiasco, and in theory allows for tariff- and quota-free UK-EU trade. However, the agreement is limited in scope and has created significant new non-tariff barriers, trade frictions and regulatory compliance issues.
- Brexit has also inflamed tensions in Northern Ireland, which remains within a regulatory union with the EU in order to avoid border checks on most goods. As expected, this has disrupted post-Brexit trade between Britain and Northern Ireland. The UK government has threatened to rewrite the Northern Ireland protocol that it had previously agreed under the TCA, although we do not expect it to disapply the protocol unilaterally. The EU has warned that doing so would trigger retaliatory action by the bloc, which would further damage UK-EU trade.
- More broadly, Brexit has led to a decline in UK-EU trade in food products and has disrupted large parts of the UK's fisheries, agriculture, and food and drink sectors, which face significant medium-term damage. An exodus of EU labour has contributed to employee shortages and pockets of stronger wage inflation in some retail and foodservice sectors.

[United Kingdom](#) | [Energy](#) | [Overview](#)

March 29th 2022

- Total energy consumption in the UK has trended gradually lower since the mid-1990s. The 8.2% year-on-year growth witnessed in 2021 was due to the economic recovery following the downturn caused by the covid-19 pandemic. Together, fossil fuels account for about 77% of the energy mix.
- EIU expects total energy consumption to increase by an annual average of 0.1% in the 2022-31 forecast period, but growth will become negative by the end of the decade.
- Despite rebounding by 16.7% year on year in 2021, oil consumption will fall by an annual average of 0.4% in 2022-31. This is partly due to the electrification of transport and energy-efficiency measures.
- Natural-gas consumption increased by 6.3% in 2021, but growth will slow to 2.1% in 2022 amid current high energy prices. We forecast that natural-gas consumption will grow at an annual average of 0.2% in 2022-31.
- Coal consumption will fall dramatically, owing mainly to the planned phasing-out of coal use in power generation by the end of 2024. We expect annual coal consumption to fall by an annual average of 22.3% in 2022-31. The UK government has set a deadline of 2024 for phasing out coal-fired power, with only one coal-fired power plant

## One-click report : United Kingdom ,March 21st 2024

remaining in the UK by the end of 2022. Although we expect the government to meet this target, there is some risk that this will be delayed if the "gas crisis" entailing a shortage of supply and high prices is not resolved.

- The share of non-hydro renewables in power generation is forecast to rise from 32% in 2022 to 50% in 2031.
- The post-Brexit UK-EU trade deal was finalised in December 2020, and the UK and the EU have not yet reached agreement on all aspects of their future energy relationship. Uncertainty persists over many elements of energy policy, particularly after recent sharp price rises for petrol, natural gas and electricity. The government has subsidised the largest provider of industrial carbon dioxide (CO<sub>2</sub>) and may intervene in the retail energy sector.

## Financial services

[United Kingdom](#) | [Finance](#) | [Overview](#) | [Financial services](#) | [Overview](#)

April 12th 2022

- The UK has one of the world's best-developed financial industries. The coronavirus has delivered a sharp, but hopefully short, shock to the sector. Managing the country's departure from the EU may prove to be a greater challenge. It is likely to require a long-term shift in trading relationships and may contribute to an ongoing shrinkage of the sector.
- London is currently one of the two leading global financial centres (along with New York) and has the largest share of many international markets. The UK financial sector—banking, insurance, fund management, securities and alternative investment—plays a significant role in the economy. In 2021 it accounted for 8.3% of gross value added, down from 9.1% at its peak in 2009, according to the Office for National Statistics (ONS). It employed 1.1m people, or 3.2% of the total workforce, down from 3.7% in 2009. The industry makes a substantial contribution to the balance of payments and tax revenue.
- In response to covid-19, the government enforced nationwide shutdowns and rolled out financial support to help workers and businesses affected. This included more than £330bn (US\$434bn) in government-backstopped loans, business tax deferments and holidays, targeted aid to the worst-hit sectors, and wage support for salaried and self-employed workers. New measures put in place in December 2021 in response to the emergence of a highly transmissible variant of the virus, named Omicron, were lifted from late February 2022 onwards.
- The UK recorded real GDP growth of 7.4% in 2021, following a severe 9.3% contraction amid the pandemic in 2020. GDP rose above its pre-pandemic level for the first time in November 2021, according to the ONS. EIU forecasts growth of 3.9% in 2022 and an average of 1.8% in 2023-26. The UK has been one of the worst-hit

## One-click report : United Kingdom ,March 21st 2024

---

countries in Europe in economic terms, as well as having among the region's highest cumulative totals of covid-19 deaths and confirmed cases. However, the UK's relatively high coronavirus vaccination rate has helped to contain the incidence of serious illness and hospitalisation during the Omicron wave.

- The UK left the EU on January 31st 2020, ending 47 years of membership. A transition period with the EU ended on December 31st 2020. An EU-UK free-trade agreement was concluded in December 2020 that averted the most extreme form of "no deal" disorder. The trade pact did not include financial services, but the UK and the EU agreed and implemented some temporary arrangements to reduce disruption to financial markets.
- The UK granted a designation of regulatory equivalence for many EU financial firms, allowing them to continue to operate in the country. However, the EU did not reciprocate for UK financial firms, except for derivatives clearing houses. The UK government is emphasising the benefits of being able to determine its own priorities for the financial sector. It has begun to reform regulations governing UK financial markets, starting with changes to stockmarket listing rules.
- The Bank of England (BoE, the central bank) has raised its main rate three times since December 2021, from 0.1% to 0.75%, in the face of rising inflationary pressures. It has also signalled that further modest rate rises could be required in the coming months. UK consumer price inflation averaged 2.5% in 2021, up from 1% in 2020, and we forecast that inflation will rise further, to an average of 6.4%, in 2022. The BoE has begun to reduce its quantitative easing programme, which peaked at £895bn.
- We expect London to retain its status as one of the world's main financial centres, especially in the trading of foreign exchange and derivatives, but a loss of influence and post-Brexit restrictions on financial services trade with the EU are inevitable. Reaching agreement on a complex new trading arrangement will be difficult and time-consuming (taking years, rather than months), and financial firms in the UK must come to terms with the loss of "passporting" (the right of UK-regulated companies to do business in the EU and vice versa).

## One-click report : United Kingdom ,March 21st 2024

---

- Financial services companies previously serving the EU from the UK will continue to relocate some of their operations and staff to within the bloc. Although outflows of financial sector employees (and related tax revenue) from the UK have so far been modest, it is likely that the trend will continue as competing financial services hubs, including Amsterdam (Netherlands), Frankfurt (Germany) and Paris (France), gradually grow in size and influence. European policymakers will strive to attract major financial functions away from London.

## Healthcare

[United Kingdom](#) | [Healthcare](#) | [Spending](#)

March 23rd 2022

### Overview

- In the past two years the UK's healthcare system, already struggling with high demand, has faced two challenges: the covid-19 pandemic and the UK's departure from the EU's single market (Brexit) on January 1st 2021. The first has pushed up death rates, necessitated additional funding and expanded waiting lists for non-covid care. The second has caused recruitment problems and necessitated an overhaul of pharmaceutical supervision.
- In order to fund covid spending and support businesses and households during lockdowns, the centre-right Conservative government has let public debt rise to more than 100% of GDP, its highest level since the 1960s. The Russia-Ukraine war is expected to hit the UK economy, dashing hopes that a rapid economic recovery would help to reduce these debts. EIU expects real GDP growth to average 2.3% per year over the forecast period (2022-26), with a marked deceleration.

## One-click report : United Kingdom ,March 21st 2024

- The UK responded to the pandemic by increasing spending on healthcare to an estimated 12.8% of GDP in 2020, from 10.2% in 2019, according to the OECD. We estimate that this share fell to 12.5% in 2021 as real GDP recovered, despite continued real growth in healthcare spending.
- An additional tax levy, due to take effect from April 2023, is intended to help to fund health and social care over the forecast period. Even so, we expect total health spending growth to slow as fiscal constraints bite, taking the share of GDP back to 12% in 2026. We forecast that health spending will rise at a compound annual growth rate (CAGR) of 4.1% in 2022-26. However, with inflation high, real growth in healthcare spending will average just 1.3% a year, compared with 2.5% a year in the five years before the pandemic.
- Pharmaceutical sales will grow at a CAGR of 4.6% in nominal local-currency terms in 2022-26, driven partly by covid-19 vaccine sales. So far, about 77.2% of the population aged over 12 have received at least two vaccine doses, and over 56% have received three doses. A booster (fourth) dose is offered to certain groups from early 2022.
- With daily deaths attributed to covid-19 now less than one-fifth of the highest rate, social restrictions were lifted from March and free testing will end in April. The UK has recorded 161,800 cumulative covid-19 deaths out of a

## One-click report : United Kingdom ,March 21st 2024

global total of 5.98m. However, in terms of excess deaths per 100,000 population (arguably a better measure of the toll), the UK has performed better than some EU countries.

### Funding sources

- Healthcare provision in the UK is dominated by the National Health Service (NHS), which is financed primarily via general taxation. NHS care is free at the point of delivery, but fixed charges are levied (in England) for most prescription medicines and dental care, with some exemptions.
- Public expenditure (including compulsory contributions) accounted for 81.7% of current health spending in 2020, according to provisional data from the OECD, above the OECD average of 74%. The UK's share has increased from 78.5% in 2019 (returning to the share last seen in 2010) and is likely to have risen further during the pandemic. Even so, the share will remain lower than current shares in Germany (85.1%) and France (83.7%).

<sup>a</sup> Actual. <sup>b</sup> EIU estimates. <sup>c</sup> EIU forecasts.

Sources: US Census Bureau; UN; OECD; World Bank; EIU.

- Devolution since 1999 means that most NHS funding and commissioning occurs under separate frameworks in the four UK nations, with variations in some policy areas. About 86% of funding goes to NHS England, with Scotland, Wales and Northern Ireland sharing the rest under a formula (the Barnett formula) related to population size.
- The UK's relatively weak public finances will come under further pressure as a result of the coronavirus crisis. However, the government reaffirmed a pre-pandemic funding deal in 2018, which will cause spending (excluding emergency covid-19 funds) to rise by £33.9bn (US\$45bn) per year by 2023/24.
- Planned NHS spending increased to £212bn in fiscal year 2020/21 (April-March), from £150bn in 2019/20. The country has also allocated more than £20bn in covid-19 funding for 2021/22.
- In September 2021 the government announced plans to increase national insurance for all working adults by 1.25 percentage points from April 2022. The levy, which will become a tax on earned income from 2023, is intended to raise health and social care funding by £12bn a year.

## One-click report : United Kingdom ,March 21st 2024

### Private health insurance

- Voluntary (or private) spending on healthcare accounted for 18.3% (provisional data) of the UK's total health expenditure in 2020, the smallest share since 2010, according to the OECD. Spending also fell when measured on a per capita basis at purchasing power parity (PPP) current prices in 2020. By contrast, up until 2018, the share of voluntary spending on healthcare had been gradually rising as a share of overall health expenditure.
- This decline was driven by a fall in spending on healthcare from voluntary insurance schemes. These shrank in both per capita PPP terms and also as a percentage of overall spending to 4.4%, from 5.6% in 2019.
- Out-of-pocket spending accounted for 13.8% of total health spending, down from 15.9% in 2019. Nevertheless, the amount of out-of-pocket spending continued to rise on a per capita basis (current prices; PPP) in 2020.
- The private health insurance market remained broadly flat in the years preceding the pandemic, reflecting the dominance of the NHS. However, according to a 2021 study by LaingBuisson, a consultancy, in 2020 private spending on private acute medical care in hospitals and clinics shrank by about 30%, to an estimated £6.17bn, as

## One-click report : United Kingdom ,March 21st 2024

---

the private sector provided resources to the NHS (at cost). Demand for private acute medical care also ceased in response to covid-19 travel restrictions.

- The LaingBuisson report also highlighted a strong rebound in private acute medical care towards the end of 2020. Again much of this comes from NHS contracts as the health services try to reduce the backlog of non-covid care. Demand from people wishing to finance their own diagnostic and elective procedures has also risen.
- The leading independent healthcare group is Bupa, with 2.3m policyholders and 31m customers at the end of June 2020, and was boosted by an agreement between Bupa UK and a friendly society, CS Healthcare, to transfer the latter's 17,500 members as of January 2021.

## Telecommunications

[United Kingdom](#) | [Telecommunications](#) | [Overview](#)

May 16th 2022

- Mobile telephony makes up the majority of telecommunications connections in the UK. The mobile penetration rate has levelled off in recent years amid a saturated market. EIU expects a moderate rise during the five-year forecast period (2022-26), with the rate stabilising around the 117% mark.
- There were an estimated 40.3 broadband subscriptions per 100 people in 2020—the tenth-highest rate in the OECD—with total internet user penetration at 94.8% of the population. We forecast a rise in user penetration to 99.4% by 2026, with the coronavirus pandemic likely to accelerate the upward trend.
- A UK digital strategy was published in 2017, covering areas such as digital skills, connectivity and cyber-security. The publication of an updated strategy, which is expected to focus on tech-led economic growth and productivity

## One-click report : United Kingdom ,March 21st 2024

in the light of the pandemic, was still awaited in mid-May 2022. The government has established a new central digital and data office, which will focus on innovation and transformation strategies related to cyber-security, data and emerging technologies.

- The UK is ahead of many European countries in fifth-generation (5G) deployment, largely owing to a clear policy. The country's largest mobile operators have all launched 5G services, although speed remains below expectations. Operators will focus on boosting revenue from industrial usage of 5G.
- The Telecommunications (Security) Act, aimed at safeguarding the UK's 5G and fibre-broadband infrastructure, became law in November 2021. It provides the state with new powers to impose controls on the use of telecoms goods, services or facilities deemed to be a high risk to national security. Companies that violate these controls will be subject to a fine of up to 10% of their relevant turnover, or £100,000 (US\$132,000) per day in cases of persistent violations.
- The government's digital strategy aims for the majority of the population to have 5G mobile coverage by 2027. In 2020 the government and Ofcom, the telecoms regulator, agreed on a scheme with the UK's four main mobile network operators (MNOs)—O2, EE, Vodafone and Three—for a shared rural 4G network that would remove most connectivity "not spots" (areas without 4G coverage) by 2025.
- A 2018 commitment to achieve "full-fibre broadband coverage" by 2025 has been watered down to a minimum of 85% gigabit-capable broadband by the same year. Most of the network will be built through private investment, with a government budget of £5bn (US\$6.6bn) allocated to the 20% of UK premises that are hardest to reach. In November 2020 the government announced plans to spend £1.2bn of this funding in 2020-25.
